

300W

CHASSIS MOUNTING NON-INDUCTIVE
HIGH POWER RESISTORS
RPM250, RPM300

Features and Applications

Small size SOT227, light weight, 300W high power resistor install on air-cooled heat sink or water-cooling is necessary.

Completely resin filled structure provides high insulation voltage between heat-sink / resistor and partial discharge performance, long-life stable operation.

2.5kV insulation voltage is standard and 4.0 kV insulation is available in option.

Various 6 types of circuit configuration gives ease customer's applications.

Very low series inductance and parallel capacitance make wide frequency range operation.

Applications include snubber resistors, filter resistors, bleeder resistor, current detect for automotive electronics and many types of power electronics as UPS, power supply, professional audio.

Note: The depth of the screw hole is about 4.3mm from the surface of the terminal plate.
